RUDIN JET

Looking for a printed decoration on your product or for an accurate dosing system? We might have the solution you are looking for. At Ruitenberg, we have been developing Rudin®Jet to be used as specialty solution on a FoodJet printing system. Rudin®Jet is available as a decorating ink or as a functional layer and can be accurately dosed or printed on your products.

Designed to meet your requirements

Both Ruitenberg and FoodJet recognize the complexity of industrial applications and are working closely together. As a result, Rudin®Jet can be adjusted to suit specific processing needs and product properties. Ruitenberg offers its expertise of functional ingredients, while FoodJet has the know-how of machinery and processing. By joining forces we have created a new range of applications that was out of reach until now.

The time is right to take another look at your production process

Traditional dosing solutions often lack the flexibility to meet the demands of your process. Besides, some materials cannot be printed or dosed in the shape or quantity you are looking for. Rudin®Jet could be the right solution if you wish to add value to your product and give it a better exposure.

Some of the options are:

- Decoration: bread, biscuits, puff pastry, filo dough, egg cake, battered products, crisps, ...
- Flat deposition of paste or sauce: bread, pizza, flammkuchen, waffle, ...
- Different paste and sauce varieties: tomato paste, cheese sauce, tiger paste, ...
- Grill marks

Benefits:

- Ready to use or powder
- Clean label or vegan
- Applicable before or after baking

Co-creation and technical support

The advantages of the FoodJet printer system can be optimally combined with the advantages of Rudin®Jet. Thanks to its intelligent depositing solutions, a FoodJet printer can dose Rudin®Jet exactly where you want it to be positioned, in any shape and in the exact quantity you want:

- Random alignment of product on conveyor belt
- High flexibility in design
- Industrial speed

Interested to learn more about Rudin®Jet or about Ruitenberg?
